PRACTICE

While Loop Practice

Assume positive integer inputs unless a task says otherwise. Trace your loop before running it.

Level	Task	Check your result
Warm-up	Print the integers from `1` through `10`.	First `1`, last `10`
Warm-up	Read `N`; sum the integers from `1` through `N`.	`N = 5` gives `15`
Core	Sum the first `N` positive odd numbers: `1 + 3 + 5 + ...`.	`N = 4` gives `16`
Core	Find the greatest common factor of two positive integers.	`GCF(6, 9) = 3`
Challenge	Find the smallest positive integer divisible by every integer from `1` through `20`.	Result: `232792560`

- Decide what your loop variable means and update it on every pass.
- Check boundary cases such as `N = 1` and equal GCF inputs.
